

Maintenance Guide

VARIER FURNITURE

CARE INSTRUCTIONS

FABRICS

Varier partners with high-quality textile suppliers across Europe. Our products come with long lasting, innovatively produced fabric, which complements the form and function of the chairs.

UPKEEP

Dust, dirt and direct sunlight can wear down the textile components. Regular cleaning and maintenance can prolong the lifespan of your chair.

CLEANING

Vacuum frequently on medium power. Do not rub the material with force. This could damage the fabric and cause loss of colour.

ELASTICITY

We recommend textiles with adequate elasticity and durability so it delicately hugs the shape of the chair.

COVERS

Varier chair covers are non-removable, however, if needed, visit a professional upholsterer to assist you in the process.

SPOT REMOVAL

Remove the spot as quickly as possible. Dab warm, soapy water from the outer edge and work towards the center in a circular motion.

CUSTOM FABRICS

If you are considering a fabric that is not in the Varier textile collection, please ensure the fabric has the stretch and qualities needed for Varier chairs.

CARE INSTRUCTIONS

LEATHER

Varier uses the highest quality, completely natural grain hides for a rich appearance and durable functionality. Each hide is unique and will become more beautiful with time and use.

UPKEEP

To avoid dryness or cracks in the leather, professionally clean your chair one to two times a year.

EXPOSURE

Leather should not be exposed to direct sunlight, a dry atmosphere, chemicals, or a direct source of heat.

CLEANING

Weekly vacuuming or dusting with a damp cotton cloth is recommended. Clean areas that are subject to wear and grease.

SPOT REMOVAL

Remove the spot as quickly as possible. We recommend KERALUX Leather Care Set P for pigmented and semi aniline leathers. It gently and thoroughly removes dirt from the leather pores.

NATURAL MARKS

Insect bites, scars, neck wrinkles, hair whirls, or slight variations from one hide to another are typical characteristics you can expect.

CARE INSTRUCTIONS

WOOD

All wooden components are made from top quality beech ply wood from European forests. We mould the wood together in order to eliminate waste and increase durability.

UPKEEP

Wood expands and contracts, making it important the screws are checked and tightened throughout the year.

CLEANING

Stains on wood surfaces must be gently wiped off with a damp cloth and soapy water. Dry off any excess water using a dry, white cloth.

SURFACE COLOR

The structure of the wood can absorb different amounts of varnish/stain. This results in slight variations of color on the surface.

NATURAL MARKS

Wood is a living material with marks from branches and variations in color and structure. Its surface has a natural glow that will last a lifetime.
